Uptime Kuma in Docker v1.1 2024-12-17

Uptime Kuma is an easy-to-use self-hosted monitoring tool

Kuma site: https://uptime.kuma.pet
Kuma repository: https://github.com/louislam/uptime-kuma
Kuma in Docker repository: https://github.com/GSCloud/kuma

Usage

Run `make`:

- install - install container

- start - start container

- stop - stop container

- test - test container

- kill - kill container

- remove - remove container

- backup - backup database

- restore - restore database

- exec - run interactive shell

- exec run='<command>' - run <command> inside shell

- debug - run in the foreground

- config - display configuration

- logs - display logs

- purge - delete persistent data ⚠️

- docs - transpile documentation into PDF

URL: http://localhost:3001

Copy `.env-dist` to `.env` and modify the file according to your needs.

Examples

- `make install` - install

- `make backup` - backup

- `make purge restore` - purge everything and restore from backup

- `make logs` - show logs
